Procedure Acknowledgment

Brow Tint:

1. A semi-permanent dye is applied to the brow hairs (and sometimes skin) to darken and define the brows.
2. Results typically last 3–6 days depending on skin type, aftercare, and lifestyle.
3. The tint may stain the skin temporarily for a few days.
4. Color may appear darker immediately after application and will soften over 24–48 hours.

Brow Lamination:

1. A chemical solution is applied to relax and redirect brow hairs into a fuller, lifted shape.
2. Results typically last 4–8 days.
3. A nourishing serum/oil is applied to condition the hairs post-treatment.
4. Brows will need to be styled daily to maintain the laminated look.

Combined Treatment: Tint and lamination are often performed together for optimal results.

Risks and Possible Reactions

I understand the following risks may occur:

- Allergic reaction (redness, itching, swelling, burning, rash)
- Irritation or chemical burn on the skin
- Over-processing of brow hairs leading to breakage or dryness
- Uneven color result
- Skin staining that may last several days
- Temporary or permanent damage to brow hairs if aftercare is not followed
- Infection if aftercare instructions are not followed
- Results may vary based on natural brow hair type, density, and skin type

If any reaction occurs, I will contact the technician and seek medical attention if necessary.
